

Colour coding for the New Generation BiLock key head is perhaps best demonstrated in the colour chart below.

The futuristic New Generation BiLock key head has been specifically designed to incorporate extensive colour coded master keying capabilities to ensure optimal security.

One, two or three different colours can be mixed and matched from the 20 colours available [inclusive of the beige braille keyhead] in any key head, with a maximum of 8,000 colour combinations possible. This additional, flexible feature in the New Generation BiLock key head enables instant identification

of keys by system managers and building supervisors, and visibly defines, with ease, levels within a master key system.

Australian Lock Company also offers the option of specially designed colour key heads complete with company logo at an additional cost.

Correct key identification is important and convenient. With the range of key head colours an integral component, New Generation BiLock is ideal for use in any Master Key System.

Braille differentiation within the New Generation BiLock key head allows the visually impaired to also differentiate keys with a Master Key system. Thought to be the first of its kind in Australia and perhaps the world, this additional feature offers a numbering system capable of differentiating keys by "touch".
