

Colour Coded Construction Keying

Made possible with BiLock's
Quick Change Core

Security during construction...

How often do you hear of security breaches or careless damage during the often lengthy construction phases that have cost the project both time and money?

Australian Lock Company has offered the building sector BiLock high security locking systems for over two decades now. In 1997, we introduced an added feature known as “construction keying”. This added characteristic was launched in parallel with the patented Quick Change Core (QCC) onto the Australian market! This facility is available via any one of our accredited authorised agents throughout Australia and selected international markets, and has afforded end users a significantly enhanced ability to maintain a system’s security.

Something as simple as colour coding to differentiate the level of access during the construction phase offers the developer or builder a genuine, added dimension when using QCC in security during construction.

Where to start at the construction site ...

- The door hardware is fitted with the appropriate BiLock Quick Change Core (QCC) cylinder & installed to suit the door/building schedule.
- The construction cores (or plugs, as they are often called) are either keyed alike or keyed to differ in accordance with the builder’s requirements.
- These “construction” cores are purchased by the builder to better control security during construction and keep keying costs within budget ... no need to install and remove complete hardware or even cylinders with BiLock’s colour coded construction keying system.

Construction keying keeps rekeying costs down!

The Construction cores are fully keyed to 12 pins and your nearest BiLock agent will explain how the system can be designed to suit your specific requirements during construction. The cores are supplied by the agent with keys as required by project management. A QCC control key is supplied to management to facilitate the change of access levels. All Construction cores are to be purchased outright.

Mortice Lock Cylinders

FLP2301CQ –Construction Quick Change Core – 12 Pin

**No lifting and locking pins.*

**Coloured inserts POA (red, blue, or green plastic).*

Three tiers... then handover!

It is simply a three tiered system of access using blue, green and red inserts in ALCO's brass, construction plug –

- **Phase 1 ... The “Blue” level!**

The blue coloured insert is used during the initial general construction stage of the project through to completion of the shell. For instance, access may be limited to say, plumbers!

- **Phase 2 ... The “Green” level!**

By simply removing the core and replacing it with a new core containing the green insert, the developer/builder will then be covered through to lock-up stage and/or finishing trades. For instance access may be limited to say, electricians and plasterers!

- **Phase 3 ... The “Red” level!**

Again, by simply removing the “green” coloured insert and replacing with a new core containing the red insert, these locks take the developer/builder through to completion of finished trades and/or through the defects period and on to actual hand over to the tenant/owner/s. For instance access may be limited to say, painters and decorators!

- **Phase 4 ... Occupant takes ownership!**

Again, by simply removing the core [or plug] containing the red insert and replacing it with a keyed-up plug [in Chrome Plate, Satin Chrome, Polished Brass or other finish offered by Australian Lock Company]. On hand-over, the BiLock Exclusive key is presented to the proud new owner. This key has not been on site previously and any perceived risk to the keying integrity has been eliminated.

Compare BiLock's Check List with other Products on the Market ...

- Australian made, Australian owned and Australian designed.
- Powerful, secure & unique colour-coded 'Construction' keying system.
- Patented keying systems until 2033.
- Patented QCC function until 2033.
- SCEC Rated [Security Construction & Equipment Committee]
- Cost effective upgrades to the patented BiLock Exclusive.
- Continuing Australian based innovations and improvements to mechanical access control.
- A LIFETIME Guarantee* on the BiLock dual bladed key.
