SECURITY EQUIPMENT RATINGS

Class ratings apply a 'Good, Better, Best' philosophy to security products that protect Security Classified Material, Class A being the most secure through to Class C the least secure. The following includes a brief description of the relative resistance levels offered by each Class rating:

Class A

Class A containers and locking devices are designed to protect Security Classified Material. They offer a high level of resistance to surreptitious and covert attack, and a high level of resistance to forcible attack.

Class B

Class B containers and locking devices are designed to protect Security Classified Material. They offer a high level of resistance surreptitious and covert attack, and a low level of resistance to forcible attack.

Class C

Class C containers and locking devices are designed to protect Security Classified Material. They offer a medium level of resistance to surreptitious and covert attack, and a low level of resistance to forcible attack.
