BiLock New Generation represents
an evolution of high security locking
technology.

Recognisable. Trusted. Proven.

For almost two decades, Australian Lock Company Pty Ltd successfully manufactured and supplied the original BiLock Maximum Security Locking System, now proudly recognised as First Generation BiLock.

Building on this proven foundation, BiLock New Generation introduces advanced locking technology designed to meet the evolving demands of modern security environments. Combining intelligent design, enhanced protection, and dependable long-term performance, BiLock New Generation continued the innovation and reliability that defined the BiLock name.

BiLock New Generation represents an evolution of high security locking technology.

Superior design meets advanced security technology

BiLock New Generation features an innovative twin-bladed key design engineered to deliver exceptional security and key control.

The system utilises a 12-pin tumbler configuration - six pins on either side of the key - working in conjunction with dual sidebars to provide up to 16.7 million possible lock combinations.

Further enhancing the platform's security capability, BiLock New Generation incorporates a moving element within the key, combined with a uniquely shaped horizontal security rod positioned within the cylinder core to activate an additional locking dimension. This advanced design creates a highly sophisticated locking system engineered to resist manipulation and unauthorised key duplication.

Versatile by design, BiLock New Generation was engineered to integrate seamlessly with existing

First Generation BiLock systems, allowing customers to upgrade without the need to replace their entire locking infrastructure.

Designed to minimise disruption and maximise compatibility, the platform enabled authorised BiLock agents to upgrade compatible First Generation QCC BiLock systems through the addition or modification of key internal components. For QCC applications, the existing cylinder body could initially remain unchanged, providing a practical and cost-effective transition path to enhanced security.

Designed and manufactured in Australia, the BiLock New Generation key and keying system represented a new benchmark in high security locking technology.

Recognisable. Trusted. Proven.

New age design sets BiLock apart

Combining functionality with distinctive design, the BiLock New Generation key head was developed to enhance both usability and system identification within high security environments.

The ergonomically designed key head enabled quick and reliable visual identification, while extensive colour coding capabilities supported effective master key system management. With up to three interchangeable colour inserts selected from 23 available colours, keys could be customised to identify departments, access levels, user groups, or individual applications at a glance.

Additional features included braille differentiation options to assist visually impaired users.

Maintaining the trusted security principles of the BiLock platform, the dual BiLock keyway and strict authorised agent key control helped ensure keys remained highly resistant to unauthorised duplication.

BiLock New Generation represents an evolution of high security locking technology.

Our exceptional Quick Change Core

The BiLock Quick Change Core (QCC) system remains a key feature of BiLock New Generation, delivering flexibility, convenience and enhanced security within a high security locking platform.

Designed for efficient system management, the interchangeable core can be removed, recombined and reinstalled within minutes, minimising downtime while maintaining system integrity.

Key benefits of the QCC platform include:

- Over 20 years of proven performance
- Resistance to picking and impressioning
- Broad retrofit compatibility across a wide range of door hardware
- Flexible system design across QCC body styles
- Distinctive ergonomic key design
- Fast and convenient core replacement

Australian innovation backed by proven performance

Developed by Australian Lock Company, the QCC system has become one of the most recognised features within the BiLock range. BiLock New Generation builds on this legacy with advanced moving element key technology and ongoing investment in security innovation.

History repeats itself

When Master Locksmith Brian Preddey developed the original BiLock locking system in the early 1980s, the platform introduced a unique dual-bladed, pick-resistant design that would go on to secure high profile facilities and critical infrastructure installations around the world.

From commercial and government facilities through to international sites including the Stock Exchange in Kuwait City, the Sahara Casino in Las Vegas, and the Federal Treasury in Canberra, the BiLock name became recognised globally for innovation, security, and advanced locking technology.

Since joining the Safecorp Group in 1989, Australian Lock Company has continued to strengthen its reputation through the development of innovative locking solutions designed to meet evolving commercial, industrial, and high security requirements.

Driven by a commitment to product innovation and forward-thinking design, the company has built a strong reputation for anticipating market needs and delivering practical security solutions across a broad range of applications.

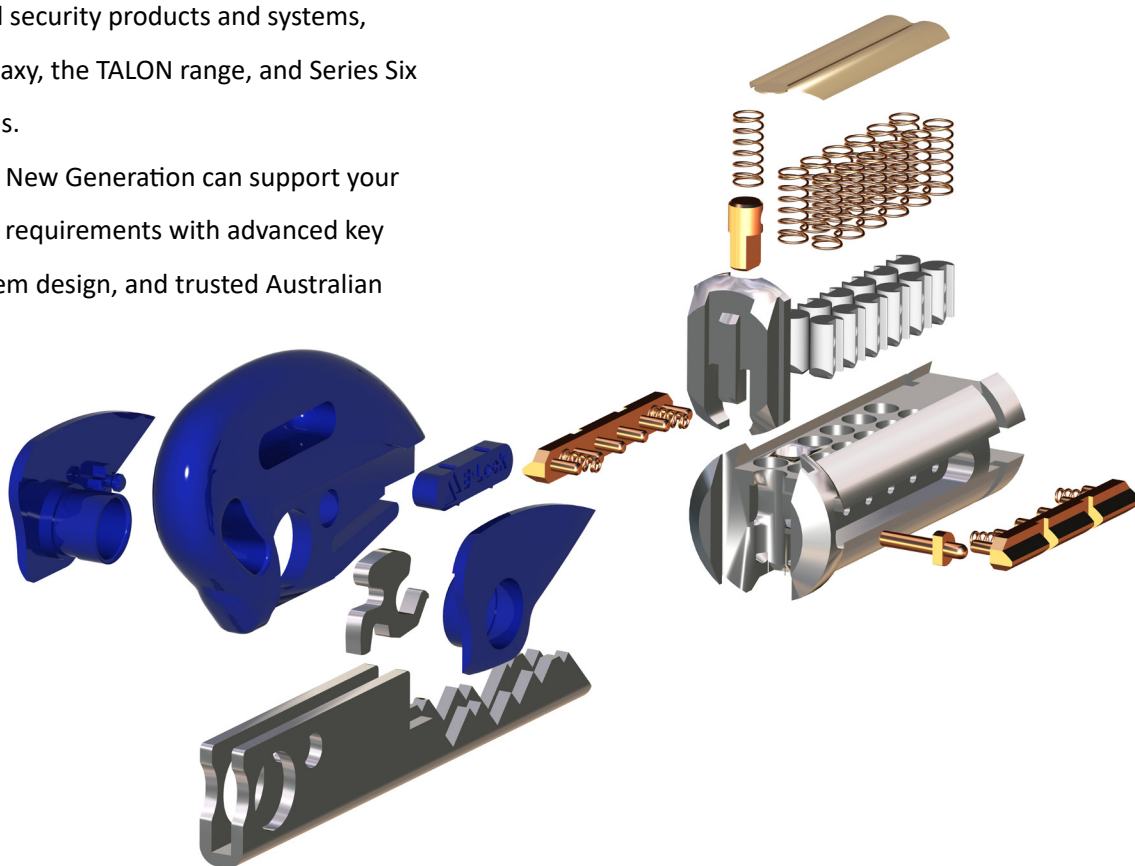

BiLock New Generation represents an evolution of high security locking technology.

This commitment has been recognised through multiple Australian awards for industrial design, manufacturing, and business excellence.

Over the years, Australian Lock Company has developed a portfolio of trusted security products and systems, including BiLock, Galaxy, the TALON range, and Series Six inline locking systems.

Discover how BiLock New Generation can support your high security locking requirements with advanced key control, flexible system design, and trusted Australian engineering.

To learn more, speak with your authorised BiLock agent, Master Locksmith, or contact Australian Lock Company for further information and support.
