Product Protection, *Product Direction and* Ongoing Support

Patent Protection

The BiLock Exclusive platform continues to be protected by Australian patents covering both the cylinder and key technology, together with the Quick Change Core system. These patents remain in force and provide strong intellectual property protection for the platform.

BiLock Exclusive Cylinders and Keys		BiLock Exclusive Quick Change Core	
Patent No.	Expiry Date:	Patent No.	Expiry Date:
2014203184	28 October 2033	2013204530	12 April 2033

With more than seven years of patent protection remaining, the BiLock Exclusive platform remains a viable and secure long-term solution. Customers and authorised BiLock Agents can continue to invest in the system with confidence, knowing the underlying technology remains protected and supported well into the next decade.

SCEC Recognition

BiLock Exclusive continues to retain its existing Security Construction and Equipment Committee (SCEC) recognition under its historical approvals.

This ongoing recognition reflects the platform's proven performance and long-standing use in approved applications. Existing installations and systems previously approved for use may continue to operate in accordance with applicable security requirements and project-specific approvals.

As Government security policies and procurement requirements continue to evolve, organisations should confirm current compliance obligations when considering any new project or application.

Product Use and Key System Management

Existing Key Systems

BiLock Exclusive remains fully supported within existing installations and master key systems.
Organisations currently using BiLock Exclusive can continue to:

- Maintain established keying structures & security protocols
- Expand existing key systems
- Add cylinders and keys as required
- Replace damaged or worn components
- Undertake routine maintanence and lifecycle management

This ongoing support protects the investment customers have made in their BiLock infrastructure while ensuring continuity of operation.

New Key Systems

BiLock Exclusive is not intended for the establishment of new key systems where Government procurement requirements specifically mandate an SL-rated product.
This approach aligns with current Government security requirements and ensures projects requiring SL-rated solutions are assessed against the appropriate approved products and standards.

Government Installations and T4 Approvals

BiLock Exclusive may still be considered for new Government installations where a T4 approval has been granted.

Such approvals are assessed individually and may take into account factors including:

- The security risk profile of the facility.
- Existing site infrastructure.
- Operational requirements.
- Lifecycle cost considerations.
- Transition planning for existing security systems.

Project stakeholders are encouraged to engage with their Security Consultant and T4 representative early in the planning process to determine suitability and approval requirements.

Long Term Value

BiLock Exclusive continues to provide significant operational and commercial value through its patented technology, extensive installed base and established performance record.

With substantial patent protection still remaining, customers and agents continue to benefit from:

- Protected key control
- Strong system integrity
- Stable and secure key system management
- Ongoing product support
- Continued market dominance

Future Development

While ALC remains committed to the ongoing support and development of BiLock Exclusive, the company is also investing in the future of mechanical access control technology.
ALC is currently developing a new patented locking platform designed to build upon the company's long history of innovation in high-security locking systems.

Development activities are ongoing and include:

01
Product Engineering and Design

02
Intellectual Property Protection

03
Security Performance Evaluation

04
Manufacturing Assessment

05
Market Suitability Analysis

06
Long-Term Platform Planning

As the project remains under development, no release date, commercial launch schedule, or market availability timeline has been determined.
Further information will be provided to authorised agents, consultants, and customers when development milestones and commercialisation plans have been finalised.
ALC remains committed to ensuring that any future platform introduction is carefully planned, appropriately supported, and aligned with the long-term interests of its customers and distribution network.

Conclusion

BiLock Exclusive remains a protected, supported, and commercially significant platform with more than seven years of patent protection remaining. Existing systems continue to be supported, the platform retains its legacy SCEC rating, and opportunities remain for approved Government applications where T4 approval is obtained.

ALC's strategic focus is to maximise the value and longevity of the current platform while simultaneously investing in the development of future patented technologies. This approach provides stability for customers, continuity for authorised agents, and confidence in the ongoing support of the BiLock Exclusive product range.

Important Notice: Any determination regarding compliance with SCEC requirements, Government procurement policies, T4 approvals, or the suitability of BiLock Exclusive for a specific application must be made in consultation with the project's Security Consultant and/or T4 authority.
